## Features

### Windows 11 Certification

Many customers have already upgraded to Windows 11 or purchased new hardware that comes with Windows 11. Now they can be assured that On-Screen Takeoff/Digital Production Control has been fully tested and certified for use with Windows 11 Professional and Enterprise (Home is not supported).

### Microsoft SQL 2019 Certification

Our last supported version of SQL was 2014 which is one it's way to being "sunset" by Microsoft. Certification of SQL 2019 ensures you can continue to use SQL-type databases in a fully-supported version of SQL for years to come.

## Changes

### Upgraded Codebase

To ensure On-Screen Takeoff continues to work with newer versions of Windows and the latest technology, we've migrated the codebase to Visual Studio 2019. This means your investment in On-Screen Takeoff 3.98.06 and future updates will keep working for a long time.

### Removed Support for CPC File Type

The CPC file type (Cartesian Perceptual Compression) is a proprietary file type that used to be used by iSqFt and other planrooms. Most have migrated to PDF and we have made the decision to stop supporting CPC files natively in the application. Like any other un-supported file type, you just have to convert to TIFF using a 3<sup>rd</sup> party utility and then use those TIFFs in On-Screen Takeoff.

## Fixes

- ON-3864 - 3-point linear takeoff results change fractionally after flipping horizontally or vertically
- ON-4031 - The scrollbar for the "View" drop-down does not work in the Annotation and View (2nd) Window (previously called the 2nd View Window) or the View (3rd) Window
- ON-4088 - Saving a new Style Set expands previously collapsed Style groups
- ON-4094 - Clicking "No" on the Delete Condition Folder confirmation prompt still deletes folder (affects versions 3.97 through 3.98.05)
- ON-4146 - The CreateDateTime field in the database was not populating correctly
- ON-4210 - Typing spaces in the Name or Estimator filter fields does not enable the Clear Filter button on the Bids Tab
- ON-4211 - Right-clicking while holding down the left mouse button will cause On-Screen Takeoff to lock up (Customer Ticket # 02118301)
- ON-4226 - Clicking <ENTER> while editing a Text Annotation moves focus out of the text box

- ON-4333 - Copying and Pasting a Highlighter annotation in the Annotation and View (2nd) Window does not save the pasted Highlight
- ON-4336 - Cut and Paste any Annotation in Main window doesn't show pasted object in Annotation and View (2nd) window
- ON-4424 - The preview window is blank when adding an Overlay via the Overlay Wizard

## Known Issues

- There are several Known Issues related to the new functionality introduced in the Annotation and View Window and 3<sup>rd</sup> View Window. Please see the Release Notes for OST v.3.98.05.57 for details.
